

Jenx Junior+ Seating Aid

The Junior+ offers highly flexible supportive seating for children from 18 months - 12 years. An outstanding level of versatility is achieved through a wide variety of head, trunk, leg and foot support options as well as a choice of bases, meaning each Junior+ can be exactly tailored to the needs of any individual child. The contoured seat unit constructed from super-soft polyurethane and memory foam provides unparalleled comfort and the perfect base for true pelvic stability. Created in conjunction with children, parents, therapists and care staff, the Junior+ has been thoughtfully and carefully designed to meet a wide range of needs - meaning every child can be comfortable and perfectly supported, allowing them to get on with playing and learning.

- Outstanding Pelvic Control System: Contoured seating with memory foam seat pad, independently adjustable lumbar/sacral support and a 4 point lap strap all provided as standard make the Jenx Junior+ outstanding when it comes to pelvic control. Plus if you find this isn't enough, the optional Ischial Bar will help prevent low tone or very active children from slipping into sacral sitting.
- PU Support Pads: Included as standard for hip support with easy, flip-away action for leg support. All pads are made from super-soft polyurethane – fully flexible, easy to clean and impervious to fluids, making them hygienic and robust.
- Adjustable Seat Depth: To ensure the fit is exactly right for each child, the seat depth is fully adjustable. This is a tool free, quick and easy to access adjustment.
- Leg Control Pads: Use 2 or 4; these unique Leg Control Pads allow you to control leg positioning independently, creating abduction or adduction or controlling windsweeping. Simple to adjust, they flip completely out of the way for smooth, safe, dignified and unobstructed transfers.

- Flip-up Angle Adjustable Footplate: To accommodate or encourage dorsi or plantar flexion. Adjusts quickly and simply with the turn of a button, flips up for safe and easy standing transfers with the footplate held out of the way with a concealed magnet. Now with easy fit slots making attaching sandals and other foot support options a breeze.
