

JAY J2 - Recline Cushion

JAY[®]

- The Jay J2 Recline Cushion reduces the movement of fluid to the rear of the fluid pad.
- This helps prevent bottoming out against the front wall of the cushion. Bottoming out can occur when the position of the pelvis changes due to a reclined position.
- Designed for tilt and/or reclining seating systems.
- Recommended for mild sacral sitters and those who transfer by scooting to the back of the chair. The J2 Recline is designed to reduce the incidence of pressure sores.
- Standard Ballistic Stretch cover that reduces surface tension, Air Exchange or Incontinence covers are available.
- Pressure Care Rating: Very High Risk
