

Droplet Intelligent Hydration Kit

Droplet® Intelligent Hydration Kit. The Intelligent Hydration System that reminds you to drink.

Dehydration is a silent killer. Studies show that dehydration can cause falls, acute kidney injury, increase hospital admissions, and even become a contributing factor to deaths in elderly patients.

The Droplet® hydration system can help avoid thousands of unnecessary deaths every year.

Droplet® uses spoken and visual prompts to remind the user to drink. Family members or carers can record their own personalised messages. This is both comforting and encouraging to the user. At night, the Base glows gently to help the user to find their drink in the dark. This gives the user independence over their own hydration.

- Droplet® is the world's 1st talking memory hydration aid.
- At its heart is the Droplet® Light and Sound Reminder Base
- It's an intelligent, programmable base that will talk to the user if they are not drinking enough and will alert the carer at the same time.
- With a simple twist the base attaches to either the Droplet® Mug or Droplet® Tumbler.
- The Droplet® Flow Control Lid fits easily to the top of the mug or tumbler to help people who are coping with tremors or swallowing problems.
- Volume approx 23db - 43db
- Powered by 3x AAA batteries
