

JAY Cushion - LowZone Switch

JAY®

The original memory foam sandwich construction cushion. Thanks to its sandwich construction, the cushion can be used any way up. It's temperature sensitive memory foam offers all day support.

- **Memory Foam Top & Bottom** - Flat temperature sensitive foam cushion that can be flipped and rotated to wear evenly. Any way up, any way' round, no nonsense support and protection.
- **Wipedown Cover** - An extra protective water-resistant 4-way stretch black PU cover to stretch enough so the user can immerse efficiently in the cushion. The cover is easy to care for as it can be wiped clean and washed at 60 degrees. An additional Platitition liner protects the foam.
- **Temperature Sensitive Foam Cushion** - The fully enclosed gel pouch benefits from foam and gel working in sync to reduce pressure. Slow moving gel consistency prevents migration and provides comfort and pressure relief. The high performance visco elastic layer of foam is temperature sensitive, encloses the core of the cushion and offers great pressure reduction across the cushion, offering all day support. Orientation marking on cushion as well as cover ensure the correct placement.

Warranty Information

- 2 Years
