

Aspire Bed Moving Trolley

- The Bed Moving Trolley is designed to assist in the safe handling and manoeuvring of one-piece beds (long single to queen sizes) over relatively flat and even terrain.
- It should not be used to carry mattresses or other items at the same time.
- The trolley has a narrow base and easily manoeuvres within small corridors making home bed deliveries safer and easier.
- The trolley requires at least two people to safely handle double or queen size beds.
- More than two people are required when handling any bed over rough or uneven terrain, or when a risk assessment determines that more people are necessary.
