Key Pressure Injury Risk Factors are all addressed to minimise the risk of pressure injury development:

- **Pressure** – 1-in-2 ‘pressure on / off’ cycle encourages blood flow and facilitates pressure redistribution.
- **Skin Microclimate** – Multi-stretch covers reduce shear and offer a high Moisture Vapour Transfer Rate (MVTR), this promotes airflow and enhances breathability.
- **Air Flow** – By drawing and pushing air the alternating cycle helps ventilate and reduce skin heat and moisture.
- **Sleep Quality** – Innovative pump technology reduces noise and vibration, for a quieter sleep environment.
- **Bottoming Out** – Safety Cells (Active Air 8) remain inflated to preventbottoming out and improve surface stability.
- **Infection Control** – Welded seams and zip protection prevent fluid and bacterial ingress, facilitating stringent infection control measures.

**Aspire Lifecomfort Active Air 4 – Dynamic Mattress Overlay – 135kg SWL**

The Active 4 Overlay is intended for users assessed to be “At Risk” of pressure injury and is ideal for Home Care or Facility environments. It includes the following key features:

- **Semi Digital Pump** – This simplified solution is easy to navigate and operate.
- **AutoLock** – Control panel automatically locks after 30 seconds, preventing accidental mode changes.
- **Comfort Control Dial** – Simplified pressure dial allows easy adjustment to suit user’s needs.
Aspire Lifecomfort Active Air 5 – Dynamic Mattress Overlay – 175kg SWL

The Active Air 5 Overlay is also intended for users considered to be “At Risk” of Pressure Injury but has a higher SWL of 175kg and available in both S/KS widths. The Active Air 5 is suitable for use from Home Care to Acute and Long Term care. Key features include:
- **Continuous Low Pressure (CLP)** – When activated, this mode increases user immersion and envelopment.
- **AutoDetect** – Based on the user’s weight and size, appropriate pressure output is automatically set, ensuring optimal care and protection.
- **24hr Transport Mode** – In the event of a power failure, this feature provides a security buffer allowing patients to remain on an inflated surface until power is restored.

Aspire Lifecomfort Active Air 8 – Dynamic Mattress Replacement – 200kg SWL

The Active Air 8 mattress replacement is suitable for users at “High Risk” of Pressure Injury. Available in both S/KS widths it provides the highest level of care suitable for Acute and Long Term care environments. Key features include:
- **Continuous Low Pressure (CLP)** – When activated, this mode increases user immersion and envelopment.
- **AutoDetect** – Based on the user’s weight and size, appropriate pressure output is automatically set, ensuring optimal care and protection.
- **AutoProtect** – When the head if the bed is raised to 45° or more, air pressure automatically increases to prevent bottoming out.
- **24hr Transport Mode** – In the event of a power failure, this feature provides a security buffer allowing patients to remain on an inflated surface until power can be restored.
Rapid Inflation Turbo Pump - Accessory
The turbo pump accessory can be used on any pressure mattress for inflation. It can completely inflate overlays and mattresses within 10-15 seconds, saving time for installations as well as servicing and maintenance where diagnosis can be performed more quickly.
