A MULTI-FUNCTIONAL WORK PLATFORM

The DELTA4 Ward Bed is the new generation of beds developed according to the needs of healthcare professionals. The DELTA4 bed becomes an active platform that simplifies and maximises the performances of healthcare professionals.

FEATURES

Bed Exit Alarm: Visual and acoustic alerts make the caregiver aware when a patient has left the bed (available on BEB050150)

Predictive Exit Function: Alerts the caregiver that a patient may be attempting to leave the bed (available on BEB050150)

Restless Patient Function: Signals the patient is experiencing restless behaviour so the carer can check and assist (available on BEB050150)

Weight Range Function: Alerts carer that weight of patient which was preset has decreased, meaning they may have or may be attempting to leave the bed (available on BEB050150)

INCENTRO System: The combined back and pelvic transition, reduces shear and friction forces, prevents slipping and keeps the body at a 30° angle, optimal for ventilation

Safe Exit Lights: 2x LED lights signal whether the bed is at a safe exit height, promoting safe egress for the patient (orange is unsafe and green is safe)

Safe Exit Control: Moves the platform to the minimum height and lifts the backrest up to facilitate the patient to get up from the bed

Auto Regression: Backrest automatically shifts backwards thus increasing the space on the pelvic area by creating an extra space of 13cm

Biocote: Metal components are epoxy powder coated and finished with an antibacterial additive for improved infection control

DeltaDrive: Electric centre 5th wheel with integrated controls in headboard provides increased manoeuvrability for hospital staff (available on BEB050150 and BEB050145)

Weigh Scale: Integrated system allows for precision weight measurements that can be set to automatically weigh a patient every 24 hours (available on BEB050150)

4 Sector Safety Sides: With integrated electric controls which allows full autonomy of movement to the patient

CPR Control: On both sides allows the bed platform to be brought to the horizontal position immediately accessible

Mattress Platform: Can be easily removed, all sections are designed for easy cleaning

Automatic Self-Brake: Once connected to the power net a sound alarm alerts the nursing staff about the unbraked bed and after 20 seconds the brake is automatically activated (available upon request)

X-Ray Tray: Together with HPL backrest allows extremely easy x-ray operations to be carried out without moving the patient (available upon request)

StaminaLift Compatibility: Allows for use with existing hospital systems (available upon request for BEB050140 only)

- | | | |
|--|---|---|
| 1 X-Ray Tray
