“Equipment Selection Made Easy”
Manual handling is any activity that requires the use of force exerted by a person to lift, carry, lower, push, pull move or hold any item, including a person. It also includes work involving repetitive activities, sustained muscle exertion and fixed postures.

Injuries in health, aged care, rehabilitation and disability services due to the handling of people are a major risk. Poor manual handling practices can cause injuries to the body that affect the musculoskeletal and/or nervous systems.

The most commonly injured part of the body is the back, followed by the shoulder, arm, hand and neck. But these injuries are preventable. To understand how, we have put together this guide which helps you identify the equipment you need to eliminate the risks of injury.

For the full range of products, please contact our experienced and friendly staff at Aidacare.

Do you need help with product selection and sizes? Please contact Aidacare on 1300 133 120.

For Therapist Solutions please enquire about how we can help you.
